, fibroblast growth factor (FGF)1-10 modulators and/or platelet factor (PAF) antagonists. The method is useful for treating
                                                                                                                                                                                                                                 atherosclerosis, coronary conditions (e.g. myocardial infarction), cancer, diabetes, endometriosis, fever, glomerulonephritis, hyperalgesia, inflammatory bowel disease, ischaemia, pain, Parkinson's disease, psoriasis and septic shock. The present sequence was used in a sequence
                                  activating factor (PAF) antagonists. The method is useful for treating conditions leading to bone loss such as rheumatoid arthritis, multiple sclenosis, osteoprosis, osteomyelitis and asthma. The method is also useful for treating inflammation, systemic lupus earthematosus (SLE) an graft versus-host disease (GYHD). Other diseases that can be treated include acute pancreatitis, Alzheimer's disease, anorexia,

This sequence is the human tumour necrosis factor inhibitor. The protein was used to make the truncated soluble tumnour necrosis factor receptor (gTNFR) proteins of the invention. The truncated sTNFR proteins and tumour necrosis factor binding proteins (TNBP) are used to treat any TNF-mediated disease, e.g. arthritis, adult respiratory distress syndrome, cacheria/Anorexia, cancer, chronic fatigue syndrome, graft rejection, Alzheimer's disease and other autoimmune diseases. Calls transformed with a vector containing DNA encoding the protein may be used for production of recombinant sTNFR, which may also be used for measuring the amount of STNFR in samples and to raise antibodies against STNFR. TNBP may also be used in preparation of therapeutic compositions for treating the above diseases. The STNFR proteins are well suited to large scale production (since they lack the demindation site in region 11-126, so are more stable in yivo); contain fewer disulphide bonds and fewer epitopes, making them less antigenic than full-length proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ģ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tumour necrosis factor receptor 1; TNFR-1; inhibitor; osteoprotegerin;

```
an osteoprotegerin (OPG) dimerisation domain fused to a heterologous amino acid sequence. Also described are: (1) a multimer polypeptide comprising covalently associated Al monomers; (2) an isolated nucleic acid encoding Al; (3) an expression vector comprising the nucleic acid encoding Al; (3) an expression vector comprising the nucleic acid expression vector so that the nucleic acid is expressible. The products from the present invention are useful to treat a variety of disorders including those related to receptor binding. Compositions comprising tumour necrosis factor (TNF)/OPG and TNF receptor (TNF)/OPG chimeres are used to treat TNF and TNFF, mediated disorders such as inflammation, autoimmune diseases and disorders related to excessive apoptosis. The fused heterologous sequences to identify potential new receptors with flands. The present sequence represents the TNF inhibitor 40 kDa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    6
                                                                                                                     present invention describes a chimeric polypeptide (A1), comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        64 HWNYLTICQLCR---PCDPVMGLEEIAPCTSKRKTQCRCQPGMFCAAWALE-CTHCELLS 119

The present sequence represents a N-terminal fragment of a mutant of the soluble tumour necrosis factor (TNF) receptor, where the wild the soluble tumour necrosis factor (TNF) receptor, where the wild of type to state the space of the soluble tumour necrosis factor (TNF) receptor and ligand. These residues are also potential polyethylene glycol (PEG) conjugation after some the profession of the invention. The specification describes a method for conjugating proteins with PEG to result in PEG conjugated proteins having little or no reduction in a desired activity. Specifically, one or more amino acid residues that are critical for protein bioactivity and which are capable of reacting the methods provide PEG conjugated proteins that are more homogeneous and present in higher yields. Conjugation does not take place at amino acid residues that are are critical to the proteins bioactivity, thus maintaining the activity of the protein. The methods are used to produce PEG conjugated proteins. The methods are used to produce PEG conjugated proteins.
                                                                                                                                                                            Novel methods for site-specific protein modification by mutagenesis by replacing polyethylene glycol reacting sites

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                                                                         tumour necrosis factor (TNE) receptor. The wild type Lys residues at positions 108 and 120 are replaced with Arg (see AAY5441-42). Lys120 and Lys108 make contact between the p75 receptor and ligand. These residues are also potential polyethylene glycol (PEG) conjugation sites. The wild type p75 TNF receptor protein was mutated and conjugated to PEG, using the method of the invention. The specification descries a method for conjugating proteins with PEG to result in PEG-conjugated proteins with PEG to result in PEG-conjugated proteins with PEG to result are critical for protein bioactivity and which are capable of reacting with PEG sites are deleted, prior to conjugation of the protein to PEG. The methods provide PEG conjugation does not take place at amino and present in higher yields. Conjugation does not take place at amino caid residues that are critical to the proteins bioactivity, thus maintaining the activity of the protein. The methods are used to produce PEG conjugated proteins. The methods are used to produce PEG conjugated proteins. The methods are used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         6

The novel TNF inhibitors of the present invention are useful as therapeutic agents for inhibiting the activity of TNF and interleukin (IL-1), and for treating inflammatory and degenerative diseases mediated by TNF. The present sequence is 40 kDa TNF inhibitor. The 40 kDa TNF inhibitor can inhibit both TNF alpha and beta (lymphotoxin).
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel 30 kDa tumor necrosis factor inhibitor analog comprising a non-native cysteine residue cross-linked with polyethylene glycol, useful for treating inflammatory and degenerative diseases mediated by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         64 HWNYLTICQLCR---PCDPVMGLEEIAPCTSKRKTQCRCQPGMFCAAWALE-CTHCELLS 119

Sequence 1, Application US/08505606
Patent No. 5925351
GENERAL INFORMATION:
APPLICANT: BROWING, Jeffrey L.
APPLICANT: BROWING, Jeffrey L.
APPLICANT: HOCHMAN, Paula S.
TITLE OF INVENTION: SOLUBLE LYMPHOTOXIN-BETA RECEPTORS AND
TITLE OF INVENTION: THERAPEUTIC AGENTS FOR THE TREATMENT OF IMMUNOLOGICAL
TITLE OF INVENTION: DISEASE
NUMBER OF SEQUENCES: 1
CORRESPONDENCE ADDRESS:
ADDRESSE: James F. Haley, Jr.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        COMPUTE TOTAL STATE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATUS SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

B Molecule type

     A,Title: A receptor for tumor necrosis factor defines an unusual family of cellular and A,Reference number: A35356, MUID:90260639
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A; Note: the list of introns is incomplete
C; Superfamily: tumor necrosis factor receptor type 2; NGF receptor repeat homology
C; Keywords: duplication; glycoprotein; receptor; transmembrane protein
F;1-22/Domain: signal sequence #status predicted <SIG>
F;23-416/Product: tumor necrosis factor receptor 2 #status experimental <AMAT>
F;40-76/Domain: NGF receptor repeat homology <NG1>
F;78-119/Domain: NGF receptor repeat homology <NG2>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A;Cross-references: EMBL:X80021; NID:g666044; PIDN:CAA56324.1; PID:g825701

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δ
        Nultenaerosis factor receptor 1 precursor (validated) - human
Nultenaerosis factor receptor 1 precursor (validated) - human
Nultenaerosis factor receptor 1 preceptor; Nr Preceptor type 1
Nr Contante themse PSD fund necrosis factor receptor; The receptor type 1
Nr Contante themse PSD fund necrosis factor receptor; The receptor type 1
Nr Contante in the same separated and same separated and the same separated and same separated same separated and same separated same separated and same separated same separated same separated same separated same separated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A; Title: Soluble forms of tumor necrosis factor receptors (TNF-Rs). The cDNA for the type form of the receptor.
A; Reference number: $12057; MUID:91006021
A; Accession: $12057

GSE protein - variola minor virus (strain Garcia-1966)
C;Species: variola minor virus
C;Species: variola minor virus
C;Date: 24-Nov-1999 #sequence_revision 24-Nov-1999 #text_change 20-Jun-2000
C;Accession: D72175
R;Shochelkunov, S.N.; Totmenin, A.V.; Gutorov, V.V.; Safronov, P.F.; Massung, R.F.; Lo submitted to GenBank, March 1998
A;Bescription: Analysis of the complete coding sequence of DNA of alastrim variola mi A;Reference.number: A72150
A;Accession: D72175
A;Actus: preliminary
A;Molecule type: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                           ر

-!- FUNCTION: RECEPTOR FOR TNF-ALPHA. HIGH AFFINITY FOR TNA-ALPHA AND APPROXIMATELY 5-FOLD LOWER AFFINITY FOR TNF-BETA.

-!- SUBCELLULAR LOCATION: Type I membrane protein.

-!- PTM: PHOSPHORYLATED; MAINLY ON SERINE RESIDUES WITH A VERY LOW
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BY SINILARITY.

RA Zheng Z., Naismith J.H., Thomas D.;

RT The role of polar interactions in the molecular recognition of CD40L

RT with its receptor CD40.";

Protein Sci. 7:1124-1135(1998).

C. -- FUNCTION: RECEPTOR FOR A CYTOKINE LIGAND KNOWN AS CD40L.

C. -- FUNCTION: RECEPTOR FOR A CYTOKINE LIGAND FROWN.

C. -- STMLEAR LOCAPION: Type I membrane protein.

C. -- SIMLEARTY: CONTAINS 4 TWFR-CYS REPEATS.

C. -- STMLEARTY: CONTAINS 4 TWFR-CYS REPEATS.

C. -- DATABASE: NAME-PROW; NOTE-CD guide CD40 entry;

familial expansile osteolysis.";

Nat. Genet. 24:45-48(2000)

-!- FUNCTION: RECEPTOR FOR RANK LIGAND (RANKL; ALSO KNOWN AS

OSTEOCLAST DIFFERENTIATION FACTOR OR ODF), ESSENTIAL FOR RANKL-
MEDIATED OSTEOCLASTOGENESIS. INVOLVED IN THE REGULATION OF
INTERACTIONS BETWEEN T-CELLS AND DENDRATIC CELLS.
-!- SUBCELLULAR LOCATION: Type I membrane protein (Fotential).
-!- TISSUE SPECIFICITY: UBLOUITOUS EXPRESSION WITH HIGH LEVELS IN
SKELETAL MUSCLE, THYMUS, LIVER, COLON, SMALL INTESTINE AND ADRENAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              VARIANT FEO 16-L--L-21 DUPL, VARIANT PDB2 13-A--L-21 DUPL, AND VARIANT

      SUBCELULAR LOCATION: Type I membrane protein (Probable).
TISSUE SPECIFICITY: WIDELY EXPRESSED, WITH THE HIGHEST EXPRESSION IN LUNG, SPLEEN, AND THYMUS.
SIMILARITY: CONTAINS 3 TNFR-CYS REPEATS.

-!- FUNCTION: RECEPTOR FOR TNF-ALPHA. THE ADAPTOR MOLECULE FADD RECEPTOR: THE RESULTING AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC) PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATION WHICH INITIATES THE SUBSCOURT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE PROTEASES) MEDIATING APOPTOSIS. CONTRIBUTES TO THE INDUCTION OF NONCYTOCIDAL THE BEFREGIS INCLUDING ANTI-VIRAL STATE AND ACTIVATION OF THE ACID SPHINGOMYELINASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SUBDIVIT: THE BINDING TO THE EXTRACELLULAR DOMAIN OF THERI LEADS TO MOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERFACE SPECIFICALLY WITH THE DEATH DOMAIN OF TRAND. VARIOUS TRAND-INTERACTING PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FAND, ARE RECRUITED TO TRAIL OWNELEX BY THEIR ASSOCIATION WITH TRAND. THIS COMPLEX ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND NF-KAPPA B SIGNALING.
                                                                                                                                                                                                                                                                                                                                                                          X-RAY CRYSTALLOGRAPHY (2.85 ANGSTROMS) OF 30-211 IN COMPLEX WITH TNFB MEDLINE-93258809; PubMed=8387891;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBCELLUIAR LOCATION: Type I membrane protein.

DOMAIN: THE DOMAIN THAT INDUCES A-SMASE IS PROBABLY IDENTICAL.

THE DEATH DOMAIN. THE N-SMASE ACTIVATION DOMAIN (NSD) IS BOTH

NECESSARY AND SUFFICIENT FOR ACTIVATION OF N-SMASE.

SIMILARITY: CONTAINS 1 DEATH DOMAIN.

SIMILARITY: CONTAINS 1 DEATH DOMAIN.

"Cloning of the cDNA encoding the porcine p55 tumor necrosis factor
receptor.";

Gene 163:263-266(1995).

-I- FINCTION: RECEPTOR FOR TNF-ALPHA. THE ADAPTOR MOLECULE FADD
RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
GEGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
RECRUITS CASPASE-8 PROTECLIVIC ACTIVATION WHICH INITIATES THE
SUBSEQUENT CASCADE OF CASPASES (ASPATARE-SPECIFIC CYSTEINE
RECRUITS THE BINDING TO THE EXTRACELLULAR DOMAIN OF THERI LEADS TO
HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS
PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FADD. INTERACTING
WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD. INTERACTING
WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD. THIS COMPLEX
ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
NP. KAPPA B SIGNALING (BY SIMILARITY).

-I- SUBCLILULAR LOCATION: TYPE I membrane protein.

-I- SIMILARITY: CONTAINS 1 DEATH DOMAIN.
                                                01-OCT-1996 (Rel. 34, Last sequence update)
16-OCT-2001 (Rel. 40, Last annotation update)
Tumor necrosis factor receptor 1 precursor (p60) (TNF-R1) (TNF-RI)
                                                                                                                                                  Chordata; Craniata; Vertebrata: Euteleostomi; Cetartiodactyla; Suina; Suidae; Sus.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
